### **Announcing *ISO 9001 Survival Software Templates, Second Edition* featuring a unique documentation approach, the Scripted Flowchart Process™**

Revised Guide Offers Complete Procedure and Quality Manual Development  
Templates for Documenting an **ISO 9001:2008** Quality Management System

AEM Consulting Group, Inc. has just released a new printing of the second edition of the *ISO 9001 Survival Software Templates*. Revised to comply with ISO 9001:2008, this do-it-yourself practical documentation method is the result of Doug Anton and Carole Anton's years of experience implementing ISO 9001 and related quality systems. In short, their ISO software templates will jump-start an ISO 9001 implementation with an effective format that's easy to build on.

Perhaps the best news of all: by utilizing AEM's unique Scripted Flowchart Process™ system documentation is straightforward and concise. The templates include a CD-ROM, workbook, and the Antons' *ISO 9001 Survival Guide* book. The workbook shows all the procedures, checklists, reviews, forms, and agendas available with the software templates. These include a company metrics tool, a timeline template, a detailed employee training plan form, an element implementation teams planning form, and a Top Registrars listing with links to their websites. Also included are instructions for the Scripted Flowchart Process™.

Another terrific attribute: it's not necessary to learn a separate new software or hire a programmer to customize software – these templates work with Microsoft Word and Excel!

*ISO 9001 Survival Software Templates, Second Edition* is available at [www.aemconsulting.com](http://www.aemconsulting.com) and [www.amazon.com](http://www.amazon.com).
